Profile

An ambitious Data Scentist with strong problem-solving abilities and excellent communication skills. Relevant experience in Python (LLMs, AI, Machine Learning), SQL(Athena, Oracle, Postgre). 3 years of experience as a data scientist and analyst at BMW with multiple placements in Germany and the United States. Quick to adapt with an eagerness to learn new technologies.

Education

MSc. in Data Analysis for Business Intelligence,
University of Leicester
2021 – 2022 | Leicester, UK
Relevant Modules: Data Mining & Neural Networks, Fundamentals of Data Science, Introduction to R, Financial Services Information Systems and Linear Statistical Models.

Projects

Building predictive models for inpatient length-of-stay

Building an EA simulator

COVID analysis

Professional Experience

Data Scientist, *BMW Financial Services*
04/2024 – present | Farnborough, UK

- Developed an automated testing tool saving 70% of the time during the release of new products into the AWS warehouse
- Developed end-to-end traditional AI model for predicting customer renewability in Financial Services
- Created a masking tool using AWS and open-source services to obfuscate all personal and sensitive customer data before being processed by AI models
- Developed a fully functioning LLM that summarizes customer feedback comments, assigns sentiments, and categorises them into pre-defined KPI topics.

Graduate Data Scientist, *BMW Group US/UK/AG*
2022 – 2024 | New Jersey/Farnborough/Munich, USA/UK/AG
USA:

- Created an AI detection model that successfully compared paper contracts against system values
- Increased efficiency as manual comparison took 15 mins whereas the AI model compared hundreds of contracts within seconds.

UK:

- Automated performance reports that are sent to HQ monthly, saving 10 hours every month.
- Developed an end-to-end business product for understanding the renewability rate of customers.

AG:

- Developed an elasticity model to accurately price cars with highest optimization.
- Took initiative to plan and conduct a three-day workshop on a new retail strategy for employees all over Europe.

Python Developer, *INI Labs inc*
2019 – 2020

- Built HTML webpages of complex PDF, DOC, and TXT files using REGEX and tags in Python.
- Linked webpages and rendered as a RESTful API using FLASK web framework.
- Oversaw and collaborated with team members for ensuring code optimization and code reviews.

Stock time series analysis

Skills

AWS: Athena, EC2, S3, Sagemaker, Comprehend, Bedrock, Textract

AI: LLM, Machine Learning, FAISS Vector DB, RAG systems, Agentic Workflows, Statistical Analysis, Deep Learning

Others: GitHub, Python, Pandas, Numpy, Scikit, SQL, Oracle, APEX, Postgre SQL, Tableau, JAVA, JS, C, Kotlin
