Mohammed Farhaan Ahmed

Dear Hiring Manager,

I am writing to express my strong interest in the Senior AI Engineer position at your London-based consultancy. With a Master's degree in Data Analysis for Business Intelligence and over three years of hands-on experience at BMW Group, I have built and deployed production-grade AI systems that directly align with the requirements of this role.

In my current role as a Data Scientist at BMW Financial Services, I have developed end-to-end LLM applications that summarize customer feedback, assign sentiment, and categorize comments into predefined KPI topics. I have also implemented RAG pipelines and retrieval systems using FAISS Vector DB and AWS Bedrock, ensuring accurate and context-aware outputs. Additionally, I built an automated testing tool that reduced release time by 70% and created a data masking tool to obfuscate sensitive customer data before AI processing—demonstrating my ability to deliver robust, production-ready solutions.

My experience extends to building agentic workflows and traditional ML models, including a predictability model for customer renewability and an elasticity model for optimized car pricing. At BMW Group US/UK/AG, I developed an AI detection model that compared paper contracts against system values, reducing manual comparison time from 15 minutes to seconds. I also automated monthly performance reports, saving 10 hours per month.

I am proficient in Python, SQL, AWS services (Athena, Sagemaker, Bedrock, Textract), and modern AI frameworks like LangChain and LangGraph. My background in software engineering, combined with my experience in production environments, makes me well-suited to design and deploy the LLM-powered systems your clients need.

I am eager to bring my technical expertise and collaborative spirit to your team. Thank you for considering my application.

Best regards,
Mohammed Farhaan Ahmed
