Mohammed Farhaan Ahmed

Dear Hiring Manager,

I am writing to express my strong interest in the AI Engineer role within your Wealth Management division. With my background as a Data Scientist at BMW Group—including multiple international placements—and a Master's in Data Analysis for Business Intelligence, I am confident I can deliver the 0-to-1 AI solutions your team needs as its first AI Engineer.

In my current role, I have built and deployed production-ready LLMs and traditional AI models that directly impact business outcomes. For example, I developed a fully functioning LLM that summarizes customer feedback, assigns sentiment, and categorizes comments into predefined KPI topics. I also created an end-to-end AI model for predicting customer renewability in Financial Services and built an automated testing tool that saved 70% of release time for new AWS warehouse products. These experiences align directly with your need for an engineer who can own the full lifecycle of AI models, from conception to production.

My technical toolkit is well-suited to this role. I am proficient in Python, AWS (SageMaker, Bedrock, Comprehend, Textract), and have hands-on experience with FAISS Vector DB, RAG systems, and agentic workflows. Additionally, my background in software development—building RESTful APIs with Flask and collaborating on code reviews—ensures I bring the strong software engineering foundation you value.

I am eager to bring my blend of AI engineering, financial services domain knowledge, and entrepreneurial drive to your team. Thank you for your time and consideration.

Sincerely,
Mohammed Farhaan Ahmed
