Mohammed Farhaan Ahmed

Dear Hiring Manager,

I am writing to express my strong interest in the Senior Data Scientist position at your London-based AI software company. With over three years of hands-on experience at BMW Group—spanning placements in Germany and the United States—I have developed and deployed production-grade AI systems that directly align with your mission of building conversational analytics platforms for complex datasets.

In my current role as a Data Scientist at BMW Financial Services, I have delivered impactful solutions using the exact technologies you require. I developed a fully functioning LLM that summarizes customer feedback, assigns sentiment, and categorizes comments into predefined KPI topics—directly mirroring your work on conversational analytics and NLP systems. Additionally, I built an end-to-end traditional AI model for predicting customer renewability and created a masking tool using AWS and open-source services to obfuscate sensitive data before AI processing. My experience with AWS (Athena, SageMaker, Bedrock, Textract) and Python (LLMs, RAG systems, FAISS Vector DB, Agentic Workflows) equips me to hit the ground running on your AWS-based platform.

I am particularly drawn to applying my statistical modeling and experimentation skills to financial market data within the London Stock Exchange ecosystem. At BMW, I developed an elasticity model for optimal car pricing and automated performance reports saving 10 hours monthly. My MSc in Data Analysis for Business Intelligence from the University of Leicester further grounds my quantitative approach.

I am eager to contribute to your small, highly technical team. Thank you for considering my application.

Sincerely,
Mohammed Farhaan Ahmed
