Mohammed Farhaan Ahmed

Dear Hiring Manager,

I am writing to express my strong interest in the Senior AI Engineer position at your rapidly scaling AI-native consultancy. With a Master's degree in Data Analysis for Business Intelligence and over three years of hands-on experience at BMW Group—including placements in Germany and the United States—I have developed the production-grade AI engineering skills this role demands.

In my current role as a Data Scientist at BMW Financial Services, I have directly delivered the type of work outlined in your job description. I developed a fully functioning LLM that summarizes customer feedback, assigns sentiment, and categorizes comments into predefined KPI topics. I have also built end-to-end RAG pipelines and implemented retrieval systems using FAISS vector databases, alongside designing agentic workflows. My experience extends to creating a data masking tool using AWS and open-source services to obfuscate sensitive data before AI processing, ensuring compliance in production environments.

My Python engineering background is robust, spanning from developing traditional AI models for customer renewability prediction to building automated testing tools that saved 70% of release time in AWS warehouses. Additionally, my earlier role as a Python Developer involved building RESTful APIs with Flask and optimizing code through rigorous reviews—foundational software engineering skills applicable to your team.

I thrive on solving complex problems and am eager to bring my expertise in LLM workflows, RAG systems, and AWS services (including Bedrock, Sagemaker, and Textract) to your consultancy. While I understand visa sponsorship is not offered, I hold full UK work authorization.

I would welcome the opportunity to discuss how my experience aligns with your team's goals.

Best regards,

Mohammed Farhaan Ahmed
