Mohammed Farhaan Ahmed

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Data Engineer position (12-month fixed term contract) within your Data and Analytics Delivery department. With a Master's degree in Data Analysis for Business Intelligence and over three years of hands-on experience in data engineering, analytics, and machine learning—including my current role as a Data Analyst at BMW Financial Services—I am confident in my ability to contribute to your migration and integration efforts.

In my current position, I have developed an automated testing tool that reduced release time by 70% for new products entering the AWS warehouse. I also created an end-to-end AI model for predicting customer renewability and built a masking tool using AWS and open-source services to obfuscate sensitive customer data. These projects required rigorous design, testing, and adherence to data quality standards—skills directly aligned with your need for a Data Engineer who can deliver robust solutions and conduct thorough testing.

My experience on the BMW Global Leadership Development Programme further solidified my technical foundation. I have worked extensively with AWS (Athena, S3, EC2, SageMaker), SQL, and Python for data extraction, cleaning, and modelling. At BMW Group US, I developed an AI detection model that automated contract comparisons, increasing efficiency from 15 minutes per manual check to seconds. This ability to design, build, and test scalable solutions will enable me to contribute immediately to your data ecosystem migration.

I am eager to bring my critical thinking, attention to detail, and collaborative spirit to your team. Thank you for considering my application. I look forward to the opportunity to discuss how my skills align with your needs.

Sincerely,
Mohammed Farhaan Ahmed
